Please replace the first paragraph on page 33, at lines 1-6, with the following paragraph:

Figure 13 shows two non-reducing SDS gels for TFPI formulation samples in 10 mM ~~NaPO₄~~ Na₃PO₄, 150 mM NaCl, and 0.005% polysorbate-80 at pH 4 to pH 9 stored at 40°C for 0 days (lower) and 20 days (upper). No loss on TFPI is seen at 0 days. However, at 20 days cleavage fragments of TFPI may be seen at the lower pH range (*i.e.* pH 4 and pH 5). Without being bound to a particular theory, it is believed that these fragments may result from an acid catalyzed reaction.
